PROFESSIONAL SUMMARY

As a highly motivated and driven individual, I have worked as a Project Manager, Executive Assistant of the Chairman and I invested my time in trading , banking ,hospitality and financing projects. Proven expertise in the full-stack software development lifecycle from planning and analysis through design, architecture, testing, implementation and maintenance, and reporting. Skilled at creation various programs by utilizing multiple languages, including C# , java, and SQL . Remarkable efficiency in executing large-scale software development projects across fast-paced environments. Natural talent for establishing credibility and trust among software engineers to meet end-user's needs and resolve emergency technical issues. Articulate and refined communicator with the ability to learn new work-related skills.

Experiences

Principal Software Engineer | W!ntAI

Jan 2026 – current

Architected and shipped an AI SaaS Social Media Management Platform with a react/ next frontend and Spring boot backend, integrated with OpenAI for chat, RAG image generation, transcription and AI-assisted Workflows.

- Added payment/subscription infrastructure with Stripe Checkout and webhook handling and plan-based feature access control.
- Build secure auth and user lifecycle flows (signup/login /JWT auth, email verification, forgot /reset password) , plus role / membership gating for paid features.
- Containerized frontend/backend with Docker and set up EC2/Elastic beanstalk deployment scripts to run services for stable releases.
- Developed social publishing modules end to end for user's social media account connection (YouTube, Instagram, TikTok /LinkedIn /X /Pinterest /threads) , video publishing, content creating calendar, inbox/ message, AI settings, and analytics dashboards.
- Implemented backend media/data pipeline features including large upload handling, video processing flow, scheduled publishing jobs, polling /metrics runners, and cleanup schedulers.
- Integrated cloud storage and database infrastructure with AWS services (notably S3 for media and PostgreSQL) environment driven secret and configuration in production of management system.
- Maintained and built CI/CD workflows in GitHub actions for build test, docker image push for deployment which were make sure security checks (including secret scanning and CodeQL/security gates)

Software Engineer | Revature, New York

April 2022 – Oct 2022/June 2023 –August 2023

Delivered timely support, enabling team members to complete 100% of projects within deadlines, leading to a 20% overall productivity improvement.

- Analyzed business requirements and developed project plans utilizing MS Power Platform and Dynamics 365 to improve organizational business functions.
- Collaborated with stakeholders to define reporting requirements and deliver actionable insights through custom dashboards and charts.
- Created and configured Microsoft Dynamics user accounts, security roles, field-level security, and business units.
- Designed and implemented Power Automate flows to support business process automation and system data synchronization.
- Developed custom client-side functionality using JavaScript for form events, ribbon commands, and UI enhancements.
- Implemented row-level security and data governance controls within Power BI reporting solutions.
- Supported the solution lifecycle (ALM) across development, test, and production environments using Azure DevOps and GitHub Actions.
- Developed and maintained Power Pages solutions, including site configuration, authentication, and data access.
- Developed, configured, and customized Dynamics 365 applications and sharepoint, including entities, forms, views, dashboards, business rules, and security roles.
- Implemented Dynamics 365 plugins using C# to implement custom business logic and complex integrations.
- Implemented Dataverse data models and managed relationships, business logic, and validation.
-

Collaborated with cross-functional teams, such as product or project managers, designers, and other engineers, and analyzed the client's needs and designed software solutions to meet those needs.

- Designed and developed scalable software solutions using OOP languages like C#, Java, and JavaScript, increasing application reliability.
- Ensured compliance with security policies by managing user access, roles, and permissions while maintaining documentation for standard operating procedures and system configuration.
- Managed vendor support cases, ensuring timely resolution, and provided end-user support and guidance on their tree structures and calculations statements.
- Risk Mitigation & Performance Optimization: implemented strategies that mitigated security risks, reduced system vulnerabilities by 30%, and maintained high performance, resulting in a 20% overall system efficiency.
- Release management & technical support: Successfully managed the 7Kingsnetwork Websites software releases, ensuring 98% seamless deployment and resolving client issues within an average response time of under 2 hours for 500,000 users, which boosted customer satisfaction by 25%.

TECHNICAL SKILLS

Languages & Frameworks: Java| C#|JavaScript Spring |React| D365 |Next

Cloud & Tools: AWS, Azure, Docker, Git, CI/CD

Database: MS-SQL | MySQL |PostgreSQL | Data Access | Oracle

Skill Matrix: Web API | Crystal Report | Dynamics CRM 365| PowerBI | Model Driven Apps|SharePoint | | PowerApps | Canvas Apps |

Project Architectures tools : JIRA | Trello | Confluence | Microsoft Visio. | Drawio | PowerPoint

Entrepreneurship Experiences

- Acted as a representative in natural resources trading, money exchange, investment and trading, connecting buyers and sellers, providing services, and negotiating deals, facilitated transactions involving SBLC, LC, BG, while sourcing and engaging with investors to ensure secure and successful deals.
- Assisted in structuring business transactions, optimizing profitability, and legal compliance across various business operations
- Led the establishment of a clothing factory and spearheaded a hydropower project, managing operations, production planning, and market expansion while providing electricity to cities, contributing to rural development and sustainability.
